Stringless Green-Pod Beans

ASPARAGUS

ASPERGE (Fr.) SPARGEL (Ger.)
SPARAGIO (Ital.)

Sow 5 pounds per acre for roots, or
1 ounce to 50 feet

A well-cared-for Asparagus bed improves with age and lasts for many years. It may be established from seed, but much time is saved by planting roots. Seeds should be sown thinly in early spring in rows 1 to 2 feet apart. Thin out the weakest plants so the remainder will be 4 inches apart. When one or two years old, transplant in the permanent bed in rows 3 feet apart, setting the roots 1 to 1½ feet apart, from where it can be cut three years later.

Giant Washington. A rust-resisting variety with long, stout, dark green spears with a rich purple tinge. Pkt. 10c.; oz. 30c.; ¼lb. 75c.

Paradise. New. Commercial growers claim this to be far superior to the Washington types. Pkt. 15c.; oz. 75c.; ¼lb. \$2.50.

Asparagus Roots

Ready about March 20 for spring planting;
about November 1 for fall planting

The two-year roots usually produce two years after planting. Our stock is especially fine in quality.

Giant Washington. 2-yr. roots, 50, \$2.50; 100, \$4.00; 1000, \$30.00.

BEANS

Prices quoted on Beans are prepaid in quantities up to 5 pounds to the First and Second Zones; for other Zones, see Parcel Post Table on page 1. Larger quantities shipped at purchaser's expense.

Every garden should have Beans, among the finest of all vegetables. They are appetizing, rich in vitamins, and delicious fresh, canned, or dried. Bush or Snap Beans grow quickly and yield heavily. The Pole type is the heaviest yielder over a long period.

Plant 90 pounds per acre; 2 pounds for a 100-foot row

A rich, sandy loam suits Beans to perfection. Toward the end of April, or still better, in May, sowings may be made and may be repeated every two weeks until August. Have the rows about 2 feet apart. Sow quite thinly in the row and about 2 inches deep, thinning out to stand 4 to 6 inches apart in the rows.

LIMA BEANS

HARICOTS A RAMES (Fr.)
STANGENBOHNEN (Ger.)
FAGIUOLI DI LIMA (Ital.)

Prices quoted on Beans are prepaid in quantities up to 5 pounds to the First and Second Zones; for other Zones, see Parcel Post table on page 1. Larger quantities shipped at purchaser's expense.

Pole Varieties

Two pounds will plant 100 hills; 25 to 30 pounds, an acre

Plant when all danger of frost or cold nights is over, with the eye of the Bean down. Put a liberal number in a hill, as this is cheaper than replanting. When up and established, thin out to 3 or 4 plants in a hill. The poles should be set as soon as the garden is made, in rows about 3 feet apart with the poles about 3 feet apart in the row. It is a good plan to put a small shovelful of well-rotted cow-manure in each hill when the poles are set, so the Beans, when started, will make rapid growth and mature early.

Carpinteria. 88 days. Retains its green color in all stages of growth, even after being dried, and combines wonderful prolificness, flavor, and size. A good early variety with 4 or 5 Beans in a pod. Pkt. 10c.; $\frac{1}{2}$ lb. 30c.; lb. 50c.; 5 lbs. \$2.25.

Challenger or Dreer's Improved. 92 days. Although somewhat smaller than other Limas, it is very early, prolific and of delicious flavor. Pkt. 10c.; $\frac{1}{2}$ lb. 25c.; lb. 45c.; 5 lbs. \$2.00.

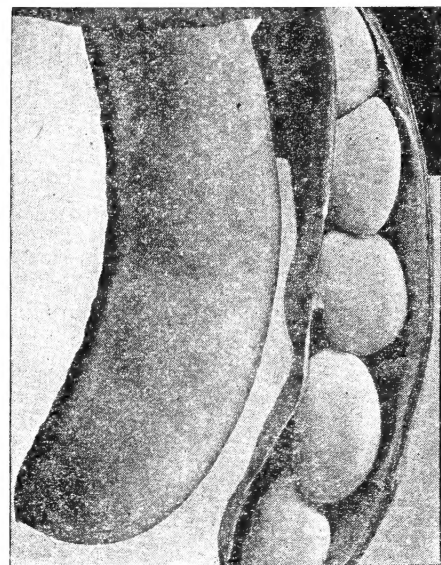

Giant-podded. 90 days. Heavy, stocky vine well filled with clusters of gigantic pods. Nice-sized white Beans. Pkt. 10c.; $\frac{1}{2}$ lb. 30c.; lb. 50c.; 5 lbs. \$2.25.

King of the Garden. 88 days. An old-time favorite. Sturdy grower, exceedingly productive and of good flavor. Pkt. 10c.; $\frac{1}{2}$ lb. 25c.; lb. 45c.; 5 lbs. \$2.00.

Michell's Evergreen. 87 days. An exceptionally early Pole Lima. It is remarkable for its productiveness and good flavor and continues bearing until frost. Pkt. 10c.; $\frac{1}{2}$ lb. 30c.; lb. 50c.; 5 lbs. \$2.25.

Carolina or Sieva. 77 days. Produces small flat Beans of fine quality. Heavy yielder. Pkt. 10c.; $\frac{1}{2}$ lb. 25c.; lb. 45c.; 5 lbs. \$2.00.

If you want your Bean-patch to yield earlier and better, inoculate the seed before planting with LEGUME-AID. When ordering, be sure to specify if wanted for garden Beans, as each leguminous crop requires a separate culture. See page 101.

Fordhook Bush Lima Beans

Bush or Dwarf Lima Beans

One pound will plant 50 feet of row

Bush Limas should be planted for early crops, as they come into bearing much sooner than the pole varieties. Plant in rows about 30 inches apart, spacing them 4 inches apart in the row and covering to the depth of $1\frac{1}{2}$ inches.

Michell's Cangreen. 66 days. Green-seeded Lima notable for the green color of the fleshy part of the seed in the dry stage, making it very attractive for canning. Highly recommended for freezing preservation. Pkt. 15c.; $\frac{1}{2}$ lb. 25c.; lb. 45c.; 5 lbs. \$2.00.

Baby Fordhook. 72 days. Plant small but branchy and vigorous; pods very numerous, tightly filled with 3 or 4 small plump seeds of high quality. Pkt. 10c.; $\frac{1}{2}$ lb. 25c.; lb. 45c.; 5 lbs. \$2.00.

Burpee's Improved. 77 days. A great improvement over the old strain of Burpee's Bush Lima. The Bean is thicker, sweeter, and the bush more prolific. Pkt. 10c.; $\frac{1}{2}$ lb. 30c.; lb. 50c.; 5 lbs. \$2.25.

Fordhook 242. Bronze Medal, 1944 All-America Selections. The outstanding characteristic of 242 is its greater productivity, particularly under adverse conditions. It does much better in hot and humid weather than any other Fordhook type. The curved pods are uniform in size, with 3 to 4 thick-seeded Beans of excellent quality and flavor. The plant is as tall as the regular Fordhook but wider spreading and with more foliage. It is the heaviest yielder of the large bush Limas. Pkt. 15c.; $\frac{1}{2}$ lb. 35c.; lb. 60c.; 5 lbs. \$2.75.

Fordhook. 75 days. Distinct, upright, vigorous growth; pods borne in clusters well above the ground and frequently contain 4 thick, luscious Beans. Matures early and continues in bearing until frost. Pkt. 10c.; $\frac{1}{2}$ lb. 35c.; lb. 55c.; 5 lbs. \$2.50.

Henderson's. 67 days. Dwarf, compact-growing variety; large clusters of pods containing very small, flat Beans. Pkt. 10c.; $\frac{1}{2}$ lb. 25c.; lb. 45c.; 5 lbs. \$2.00.

Wilson's Improved. 67 days. Earlier than Burpee's Improved Bush Lima; more prolific, but not quite as large. Pkt. 10c.; $\frac{1}{2}$ lb. 30c.; lb. 50c.; 5 lbs. \$2.25.

CEDAR BEAN-POLES (Pointed). Extra-selected quality, about 10 feet long. 12 for \$3.50; 25 for \$6.50; 50 for \$12.00; 100 for \$20.00.

One ounce will sow a row about 50 feet long

Can be used in five weeks after sowing, and is a continuous crop until killed by frost. Cultivated for the leaves which are used for greens; the outer leaves only should be carefully pulled from the plant and the foliage part separated from the rib in preparing to cook. Chard is served like spinach which it resembles in taste; the ribs when boiled and served with melted butter are the equal of the finest asparagus.

Plant when the ground has become thoroughly warmed, in hills 4 feet each way, 8 seeds in a hill. When the second set of leaves has formed, thin out to 4 plants in a hill. A type of beetle attacks this crop occasionally, which can be conquered by spraying the vines with Arsenate of Lead; when this is used, always wash the fruits thoroughly before using. If the foliage is attacked beneath by aphid or green fly, a spraying with Black-Leaf 40 is usually very effective.

Heading Varieties

For the first outdoor crop, seed is usually sown in hotbeds in February or March and transplanted to the garden in April in rows 1½ feet apart, 8 to 12 inches apart in the row. For a succession, sow in drills in the open ground at intervals of two to three weeks and thin out to 8 inches apart. For plants to force in hotbeds from November until spring, sow seeds in hotbeds in the fall. Where it is difficult to have the heading varieties develop properly on account of soil condition, we recommend using loose-leaf varieties.

Bloomsdale Savoy Spinach

MICHELL'S SELECT SPINACH SEED

EPINARD (Fr.) SPINAT (Ger.)
SPINACCIO (Ital.)

One ounce will sow about 75 feet of drill;
10 to 12 pounds, an acre

Sow for spring use, in drills 1 foot apart (covering the seed to about $\frac{1}{2}$ inch), as early as the ground can be worked, and continue to sow every two weeks till May 15. Spinach seed seldom germinates during June, July, or August, so we do not recommend sowing again until September, which is the season to provide an early winter and spring crop. On the approach of cold weather, cover with manure, long straw, or other litter. Spinach can also be grown successfully under hotbed sash.

Bloomsdale Long-standing Savoy. 42 days. Will stand considerable heat before bolting to seed, therefore valuable for spring sowing. Leaves are thick, crimped, and fleshy. Oz. 15c.; $\frac{1}{4}$ lb. 50c.; lb. \$1.50.

Nobel Giant Thick Leaf. 43 days. A quick-growing variety, large and spreading, very productive, and slow to bolt to seed. The broad leaves are rich bright green, medium thick, firm, tender, smooth and slightly crumpling, tapered to a rounded tip. Of excellent quality. Oz. 20c.; $\frac{1}{4}$ lb. 65c.; lb. \$2.00.

New Zealand. 70 days. This variety endures heat and drought and is excellent for summer use. Leaves small and thick. Heavy yielder, growing upright. One sowing can be picked from throughout the entire summer. To get successful germination, seed should be soaked in warm water for about 12 hours before sowing. Seed should be sown about May 15. Pkt. 10c.; oz. 35c.; $\frac{1}{4}$ lb. \$1.00; lb. \$3.00.

Virginia Blight-resistant Savoy. 39 days. A low-growing, spreading variety of vigorous growth, which is immune from disease. Exceedingly popular for market. Excellent for fall sowing. Oz. 15c.; $\frac{1}{4}$ lb. 50c.; lb. \$1.50.

MICHELL'S TURNIP and RUTABAGA SEED

NAVET (Fr.) WEISSE RUBE (Ger.) NAVONNE (Ital.)

One ounce of seed for 100 feet of drill; 2 pounds per acre, broadcast

For early use sow the small sorts as soon as the ground can be worked in the spring in drills 14 inches apart. As the seed is fine it should be covered but slightly, except in very dry weather. Do not sow too thickly, so the roots can develop. For fall and winter use sow broadcast from the middle of July to the middle of August.

Turnip

Rutabaga

Rutabagas should be sown in drills about 2 $\frac{1}{2}$ feet apart, and when 3 inches high thinned out to get the greatest root-development. They need to be cultivated liberally and hilled up when about 6 inches high.

Customers frequently complain that Rutabagas grow too long, rather than in a round form. In the locality of Philadelphia and New York, the seed should be sown from July 15 to August 1. Seed sown earlier than this invariably produces long roots with long stems.

American Purple-Top Yellow. 90 days. **Special Strain.** At least 8 to 10 days earlier than our usual strain. Roots are mostly round, with a small tap-root, yellow, with purple crown; flesh amber-colored, sweet and free from fiber; tops medium size and of a smoky green color. Seed can be sown much later than other strains and yet mature before freezing weather. Pkt. 10c.; oz. 25c.; $\frac{1}{4}$ lb. 75c.; lb. \$2.25.

Purple-Top Yellow. 90 days. **Usual Strain.** Top is purple, the bottom yellow. It brings a high price when sold in the market on account of its shape. Pkt. 10c.; oz. 15c.; $\frac{1}{4}$ lb. 50c.; lb. \$1.50.

TAMPALA

Tampala grows best during the long hot summer days but must be well watered during any prolonged dry spell.

Sow the seed after the ground is thoroughly warm, in shallow drills not more than $\frac{1}{2}$ inch deep, spacing the rows 2 feet apart.

Entire plants cut when 5 to 6 inches high make very tasty greens when prepared like spinach. Or if plants are thinned out to stand 2 feet apart and allowed to become well established, the tips 5 to 6 inches long may be cut and new side branches will develop and provide continuous cutting throughout the season. Stems the size of asparagus tips may be stripped of the leaves and prepared as you would asparagus. Pkt. 15c.; $\frac{1}{2}$ oz. 60c.; $\frac{1}{4}$ oz. \$1.00.

VEGETABLE PLANTS AND ROOTS

Owing to existing conditions and traffic difficulties that exist, we are unable to deliver free, orders for vegetable plants and roots under the minimum price of \$3.00 on each consignment.

We regret that it is not practicable to ship pot-grown plants of PEPPER, PARSLEY, EGG-PLANTS, and TOMATOES by Parcel Post.

The foliage of these plants is very soft and tender and we have found from experience (largely because of delays in the mail service), that they reach their destination in a worthless condition.

Nor can we ship any of the above-mentioned plants outside the Japanese beetle zone.

A fresh supply of these plants will be available during the planting season at our store, 516-18 Market St., Philadelphia 5, on a cash-and-carry basis.

MICHELL'S SELECTED HAND-PICKED FIELD CORN

Plant 8 to 10 quarts per acre in hills for shelled Corn or for silo, or sow $1\frac{1}{2}$ to 2 bushels broadcast for fodder

Our strains of Corn are not the common kinds usually found in abundance on the market. We give very careful attention to selected stock in all lines of farm seeds. This is particularly true of Field Corn where re-selection means the limit of crop with little or no increase in

cost. Our stock is selected for size of ear and fodder, uniformity of kernel, and the careful finish of the tip and butt, all of which means a considerable increase in production. Field Corn weighs 56 pounds per bushel.

Iowa 939 Hybrid

Maturity 100-105 days

Adapted to a wide range of conditions. Ears are cylindrical shaped; kernels somewhat rough and soft. Popular with cattle feeders because of non-flinty kernel. Qt. 60c.; pk. \$2.75; bus. \$9.00.

Ohio C 12 Hybrid

Maturity 110-115 days

One of the newer varieties which has been giving remarkable performance records. It matures a trifle earlier than U. S. 13, produces a good-sized ear, deep grain and stiff stalk. Can be recommended as a late variety for the south central and southwestern counties as well as the lower eastern counties of Pennsylvania. For an exceptionally heavy yield, plant Ohio C 12 this year. Qt. 60c.; pk. \$2.75; bus. \$9.00.

Ohio C 88 Hybrid

Maturity 110-115 days

A hybrid of excellent appearance and a favorite in many localities; a consistent high yielder. Stalk is medium large and stands up well in the field. Ears are large; kernels are deep and have a reddish cast, often two ears to the stalk. Corn-borer resistant. Qt. 60c.; pk. \$2.75; bus. \$9.00.

U. S. 13 Hybrid

Maturity 110-115 days

Matures about nine days later than Lancaster County Sure crop. Medium rough, deep grains; medium tall stalk. Good silage producer throughout the eastern states. One of the highest yielding of all hybrid varieties for both grain and silage. Qt. 60c.; pk. \$2.75; bus. \$9.00.

Eureka Ensilage

Silage 115 days

While this variety will not mature ears in northern localities, it is one of the best ensilage varieties. Grows very tall and leafy, giving heavy tonnage. Qt. 35c.; pk. \$1.85; bus. \$5.65.

Lancaster County Sure Crop

Silage 90 days—Grain 100 days

The most popular variety for silage in Pennsylvania, New York and the New England states. It is adaptable to practically all climatic and soil conditions and will withstand drought. Qt. 35c.; pk. \$1.65; bus. \$5.25.

Eight-rowed Yellow Flint

If wanted for silo it will be ready for harvest about September 1, when the pods will be well filled. 60 pounds per bushel.

LADINO WHITE CLOVER

Sow it for a year-round pasture. U. S. Department of Agriculture says: "Ladino is the largest growing form of White Clover. It is similar to White Dutch but grows about twice as large. Introduced from South Europe. Many farmers cut it for hay in the summer and graze it the rest of the year."

It is a long-lived perennial. Its taproot goes down 1 to 3 feet. The stems run on the ground, taking root. One plant covers 2 feet. A sparse stand soon thickens into a dense, even growth. The only parts available to grazing are the highly nutritious leaves and flowers which rise 12 to 20 inches in great profusion from the numerous joints.

It grows on any soil, even shallow hardpan, but does best on loam or clay where moisture is plentiful. The seed is so small it requires a firm hard seedbed, planted shallow and covered very lightly. Our seed is scarified, germinates over 90 per cent, requiring one-half as much per acre. Inoculate and sow in spring or fall, 5 pounds per acre alone, or 3 pounds in mixtures. Don't pasture until plants spread and start sending up shoots from the joints. Lb. \$3.00; 10 lbs. \$27.50.

Sow from 1 to 3 pounds per acre in mixture, preferably in the early spring. $\frac{3}{4}$ lb. 75c.; lb. \$2.75; 5 lbs. \$12.50; 10 lbs. \$23.50.

A beautiful lawn is the ideal background for your home and garden. The soft green velvety turf gives an air of peace and tranquility to the landscape

MICHELL'S *Reliable Grass Mixture*

SEEDING at the proper time is half the secret of success in lawn-making. But on *the seed you sow* will depend success or failure. Quality in grass seed is of particular importance. The initial cost of the *best* seed is small compared with the time and labor of weeding and probable replanting which results from cheap, inferior seed. And the satisfaction derived from a really good lawn is immeasurable.

Michell's Lawn Seed has been a leader in high quality for over fifty years. Many of the better lawns in this country are the result of Michell's seed, plus proper care. The answer lies in our insistence on furnishing only that seed which meets our rigid specifications of highest purity and germination and maximum freedom from weeds.

Quantity to sow for Lawns. We recommend sowing: 5 pounds per 1000 square feet; 150 pounds per acre on new ground without grass. In renovating established lawns, use half the above quantities.

Athletic Field Grass Seed

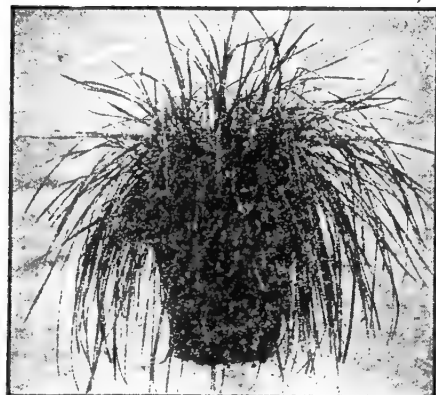

FOR RECREATIONAL GROUNDS

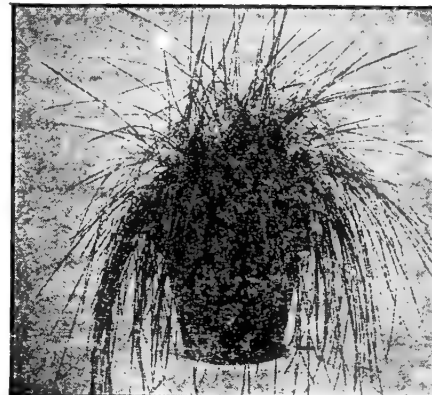

FRANKLIN FIELD, UNIVERSITY OF PENNSYLVANIA

FRANKLIN FIELD ATHLETIC GRASS SEED MIXTURE

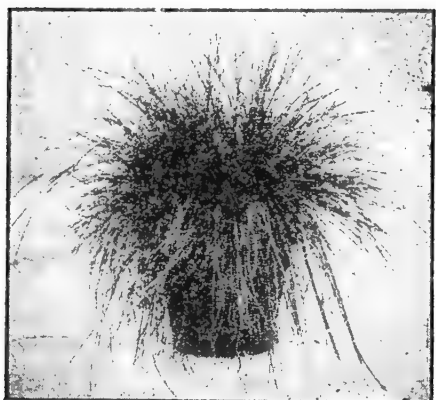

This special formula is the result of careful planning and exhaustive tests on the part of Mr. James Lambert, Botany Department, University of Pennsylvania, Philadelphia, and has been developed especially for football, baseball, hockey, polo, airports, and other fields where the turf is subject to hard usage. The named varieties of grasses, as shown in the four illustrations, are combined and blended to produce a vigorous growth which will give most satisfactory results. Mr. Lambert, who was in charge of these experiments, realized that a permanent turf for athletic fields presents puzzling problems, and developed this mixture based on an understanding of the difficulty in establishing and maintaining a turf that will withstand the punishing treatment to which recreation fields are subjected. We recommend it for all athletic fields as the very best for such purposes.

Michell's "Distinctive" Flower Seeds

FOR NOVELTIES AND SPECIALTIES, See Pages 23 and 24

During our fifty-six years of service to American garden lovers, we have always maintained a reputation for seed of superior quality. The success of our many customers in growing superior plants has strengthened our conviction that we shall supply only those varieties and strains of finest quality.

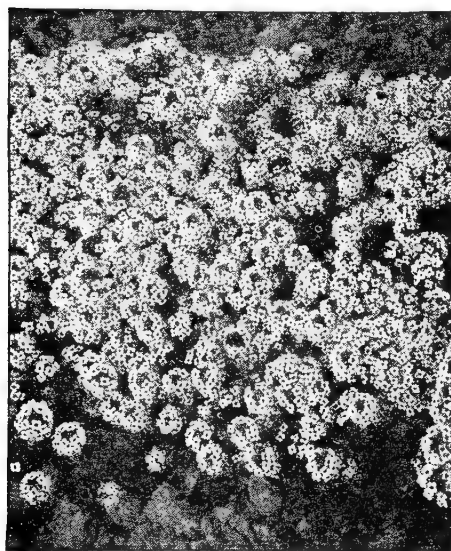

In the pages that follow, all of our Flower Seeds are arranged alphabetically. The annuals, biennials, and perennials are carefully marked so that those who are not familiar with the different kinds of plants will not be confused.

Annuals. These grow to maturity, bloom, ripen their seed, and die the same year. Asters, Poppies, Sweet Peas, Morning-Glories, and Zinnias are typical examples. Some of these Annuals are sown in a sunny window indoors, or in a hotbed or coldframe from March to May in order to get an early start. Seed of practically all Annuals can be sown in the open ground after danger of frost has passed.

Biennials. These are raised from seed started in early summer, flowering the second year, after which they die. Typical examples are Pansies, English Daisies, and Canterbury Bells.

Perennials. These plants live on from year to year, increasing in size and in beauty with age. Typical examples are Aquilegia, Delphinium, and Hardy Phlox. Many Perennials may be grown from seed, which is usually planted outdoors from June to September. The young plants may be carried over the first winter in a coldframe or they may be set in their permanent places in early autumn and given a light protective mulch the first season. Some Perennials are known as half-hardy and require winter protection each season, and those known as Tender Perennials require greenhouse protection over winter.

A complete index of Flower Seeds will be found on page 103. Varieties marked ★ are especially suitable for rock-gardens.

Barnyard manure should never be employed as a fertilizer; we recommend the use of fine-ground bonemeal. Asters should not be grown in the same location two years in succession.

No other flower has achieved more popularity. The Petunia is a plant that can be attractively used in an endless number of ways. New and charming colors and forms add to the interest of these indispensable garden flowers. They thrive in various climatic conditions and can be used as a perennial border, or in a rock-garden; they also effectively combine with other garden flowers and a garden entirely of Petunias is a delightful picture.

For freedom of bloom, variety of color, and effectiveness, the Petunia has few equals for the flower garden, porch or window-box. They commence blooming early and continue until killed by frost. We call special attention to our Large-Flowering Strains, which for size and brilliancy of coloring cannot be surpassed.

Michell's "Distinctive" Stocks

The Stock is one of the most popular and highly prized of our cultivated flowers because of its charming colors, delightful fragrance, and free-blooming character. Our seed is hand-saved from pot-grown specimens and will produce a large percentage of double flowers. The Early Giant Imperial and Early-flowering "Nice" Stocks must be started early indoors if wanted for outdoor blooming.

NEW GIANTS OF CALIFORNIA

This magnificent new group is so marked in improvement that we believe they will head the list in forcing Stocks in the very near future. Giants of California are very early flowering with a high percentage of mammoth double flowers, and having the branching habit of the Bismarck. If planted close, they will nearly attain the height of the Column Stock, approximately 2½ to 3 feet.

Michell's Hardy Garden Lilies

A garden is not complete without a planting of Hardy Lilies. They do exceedingly well in the herbaceous border. The varieties listed can be planted in the early spring months, and it is recommended that they be planted among hardy perennials, as the shade from the surrounding plants is necessary for their welfare.

CULTURAL DIRECTIONS. All Hardy Lilies should be planted from 6 to 10 inches deep. The bulbs should be completely enveloped in sand and no manure should come in contact with them, but may be placed 4 to 6 inches underneath. All loose-petaled bulbs should be planted on their sides instead of upright. Cover with leaves or litter during winter.

Regal Lily • Lilium regale

One of the finest garden Lilies introduced. On sturdy stems, 3 to 5 feet high, are produced an abundance of large, beautiful flowers, the centers of which are flushed bright golden yellow, shading off to creamy white at outer edges. Externally the flowers are streaked with brown, shaded a delightful pearly tint. Should be planted in fall or early spring, 8 to 9 inches deep. Commences flowering in July. This variety has also been used for forcing with very good results.

Michell's Gorgeous Gladiolus

There is no other summer-flowering bulb that is enjoying so great popularity as the Gladiolus. Their adaptability to garden decoration or to use as cut-flowers during the summer and early autumn is surpassed by no other flower. They are not only showy in the garden, but when cut with the first flower open will last for ten days in the house. While they thrive in almost any good garden soil, better results may be had if soil is well prepared and enriched with some of our pulverized manures. Plant bulbs 4 inches deep and from 4 to 6 inches apart.

Michell's Meritorious Dahlias

TIME OF SHIPMENT. Unless specially requested, tubers will be shipped March 15 to June 1; plants, May 15 to June 15.

CULTURE. Dahlias are at their best during the latter part of September or early in October. To get exhibition blooms, disbud plants up to August 1. Spade or plow the soil 1 to 1½ feet deep; fertilize with well-rotted stable manure or Hyper-Humus; scatter about ¼ pound of bonemeal around each hill when planting. If soil is very heavy, incorporate a liberal quantity of granulated peat moss. About August 1, apply about ½ pound bonemeal to each plant and work in thoroughly; sheep manure or potato fertilizer can be substituted for bonemeal at this time to good advantage.

How to Keep Dahlia Tubers After They Are Shipped to You if too Early to Plant

Open package and allow tubers to remain in packing material. Do not expose to air or moisture too much; keep in a cool place, but not where they will freeze.

Have you tried growing Calla Lilies outdoors?

Michell's Summer-Flowering Bulbs

Amaryllis

CULTURAL DIRECTIONS: There are few bulbs which will give the amateur gardener (or even the professional) more for his money or time than the Amaryllis.

Place the bulbs, when they are procurable (usually from fall until spring), in pots 4 to 6 inches or more in diameter, and cover only to the shoulder of the bulb, leaving the neck protruding. Use a rich sandy loam, mixed with some bonemeal or sheep-manure. Water sparingly at first but increase as the growth increases. A temperature of from 50 to 60 degrees is the most suitable. The flower-spikes, often 3 to a bulb, will develop quickly, and each bears several of the immense, beautifully colored, lily-like flowers.

After blooming, it takes the foliage a considerable time to complete its growth, and the plants should be well cared for during that period, to insure next year's blooming. Dry off gradually and after the leaves turn yellow, keep the pots in a cool and dark place for about 4 to 5 months, when they can be started again as described above.

Giant American Hybrids

The finest race of Amaryllis in cultivation, exceeding in size and fine form of their flowers as well as in the diversity of colors and markings, all former hybrids. Flowers striped and flaked. We offer mixed colors only.

Montbretias

Montbretias resemble miniature gladiolus, are fine for cutting, and excellent for border planting. They will thrive either in partial shade or full sunlight, but see that the moisture supply is good at all times.

Briefly, it is the most gorgeous blending of bronze and orange-scarlet tones ever seen in a Pompon. Amazingly prolific, the strong, branching, 2-foot plants often carry 75 or more symmetrically perfect flowers to a single spray and several sprays to a plant.

This dazzling new Pompon, we believe, is destined to be an all-time favorite—a credit to one of the great names in horticulture and another distinctly worth-while addition to the many notable introductions from Bristol. Each \$1.00; 3 for \$2.75; doz. \$10.00.

Michell's Giant-flowering Peonies

Our Peonies are strong, 3 to 5-eye divisions. A pleasing combination is to use daffodils and hardy lilies among the Peony group, to give color in the border and garden in spring, summer and fall.

RECOMMENDATIONS FOR PLANTING: The ground should be well prepared to a depth of 12 inches. Incorporate coarse bonemeal

and avoid any animal manure near the roots. When planting lay the roots in their natural position with the eyes about 2 inches below the surface. Cover with salt hay after the ground is frozen.

Betty Uprichard. Long-pointed buds, opening to large, long-lasting, very fragrant, salmon-pink flowers; reverse carmine with a coppery sheen.

Christopher Stone. Alluring Damask fragrance is only one of the fascinations of this Rose, for it has long-pointed attractive buds that open to vivid scarlet flowers in early summer. In the fall the petalage increases and the flowers become crimson with blackish shadings.

Condesa de Sastago. Fragrant yellow and raspberry-red bicolor. This gay Rose with the colors of sunny Spain will liven any planting.

Edith Nellie Perkins. Shapely, two-toned pink flowers produced in great abundance. Color is coppery rose outside and soft salmon-pink inside. Mildly fragrant. Plants branch freely and produce quantities of flowers.

Editor McFarland. Deep pink blooms. Vigorous, upright plants are freely furnished with beautifully modeled buds and fragrant blooms on strong, wiry stems.

Etoile de Hollande. This Rose charms continuously with its delightful crimson color. One of the finest, most richly fragrant verblooming red Roses.

Girona. Lovely buds of turkey-red and golden yellow on 12 to 18-inch stems, open to blooms of 20 to 30 petals. The outside row of petals becomes light Tyrian rose and makes a lovely collar for the inner petals of soft golden yellow—a charming color combination. Alluring, rich, attar-of-rose fragrance.

Golden Charm. A splendid yellow Rose which holds its color exceptionally well. Good for cutting.

Hadley. Rich crimson-red flower with velvety texture, lovely form and perfume. Moderate in growth and bloom. Splendid color which blues very little. Flowers small in summer, superb in fall.

Texas Centennial. Pat. 162. This richly fragrant variety is a blood-red sport of the great President Herbert Hoover Rose, and has all the good qualities of its parent.

Hardy Climbing and Rambler Roses

As ornamental plants for covering verandas, porches, side walls, pillars, fences, etc., these are unequaled, calling forth more admiration than anything else that can be used. The large-flowered varieties require no pruning beyond the removal of very old and worn-out canes, and the thinning out of weak growth. Canes becoming too long may be shortened.

The Ramblers, or small-flowered cluster type, should have the old canes removed at the base as soon as they finish blooming, training the new canes into place for next year's bloom.

Dormant plants, except where noted, each \$2.00, delivery free.

Climbing American Beauty. The name of this Rose is rather misleading, yet on its own merits it is an excellent Climber. It blooms only in June, when it bears an abundance of large, bright self-colored, rose-pink flowers.

Blaze. Pat. No. 10. Scarlet-crimson blooms.

Doubloons. Pat. No. 152. Here is a gloriously lovely climbing yellow Rose, noted for hardiness and vigorous, healthy growth, and furnished with dark green leathery foliage. The shapely buds open to large firm-textured blooms of saffron-yellow with clean, spicy fragrance.

Dr. W. Van Fleet. Early. Has the same bloom and foliage as the everblooming New Dawn. So vigorous in growth that it will cover the side of a garage.

King Midas. Pat. 586. Early, vigorous in growth, and richly clothed from the ground up with dark green, leathery foliage—a beautiful foil for the large, slightly fragrant, yellow blooms.

New Dawn. Pat. 1. Blush-pink. Ever-blooming. Each \$2.25.

Paul's Scarlet Climber. No other Rose in any class can compare with it for brilliancy of color, which is a vivid scarlet, that is maintained without burning or bleaching until the petals fall.

Silver Moon. Midseason white. Great silvery white, semi-double blooms, with a foil of dark leathery foliage.

Climbing Talisman. A sport of the famous Talisman Rose with multicolored blooms. Each \$2.25.

Michell's Hardy Decorative Flowering Shrubs

A planting of shrubs, massed around the boundaries of a garden, forms a harmonious background against which the bright-colored hardy perennial plants appear to their best advantage. There are many suitable locations for planting shrubs about the home-grounds. The house foundation and the angles and corners should be softened by shrubs of medium height. Spireas, Hydrangeas, Berberis, Deutzias, and others of a like nature will be found most suitable for this purpose.

Taller shrubs, such as Lilacs, Philadelphus, and Altheas, are better planted along the sides and at the back of the grounds. Here they can be used to give a frame to the property, block out undesirable views, and serve as a screen for any purpose desired. Such group plantings should be made in the nature of borders, and the shrubs selected and arranged to give a continuance of bloom and pleasing foliage combinations, together with a fall and winter coloring of bark and berries.

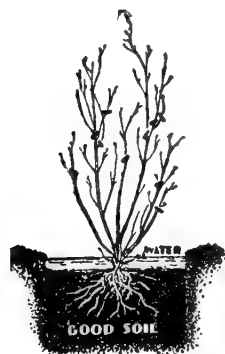

How to Plant Trees and Shrubs

Wrong
Hole too small, roots crowded.

Right
Hole large, roots spread out.

Prune branches at points indicated by black lines. Do not clip ends; cut off broken roots.

Dig generous-sized holes with perpendicular sides (never saucer shape). Put the good dirt to one side so that you can use it around the roots. Loosen up the soil in the bottom of the hole. Set trees 1 or 2 inches deeper than they stood in the nursery; set shrubs at about the same depth they stood in the nursery or slightly deeper. Spread roots out naturally and work soil over and around

them. Keep putting in good soil until the hole is nearly full, tramping firmly about the roots. If the ground is dry, pour in a bucket of water. Finally fill up the hole with loose earth which should not be tramped (see illustration above). At planting time all trees and plants must be pruned if best results are to be expected the first year. Cut back shrubs one-third to one-half, as indicated by black lines in illustration to the right. If shrubs are heavily branched, cut out a few whole branches at the base.

ALTHÆA (Hibiscus). Rose of Sharon. These thrive almost anywhere, producing bloom from July till September. 2 to 3-ft. plants, each \$1.00; 3 to 4-ft., \$1.25; 4 to 5-ft., \$1.75.

BRIDAL WREATH. See *Spiræa prunifolia*.

CERCIS canadensis. Judas Tree or Red-bud. A medium-sized tree with large, irregular head and perfect heart-shaped leaves. The profusion of delicate reddish pink blossoms with which it is covered in early spring before the foliage appears makes it one of the finest ornamental trees. 3 to 4 ft., each \$1.50.

CORALBERRY. See *Symphoricarpos vulgaris*.

CYDONIA japonica. This shrub is a beautiful sight in early spring when covered with cherry-red flowers about the size of an apple-blossom. Especially desirable as a specimen shrub for the lawn. Extra-strong 2 to 3-ft. plants, each \$1.50.

H., Otaksa. Adapted for seaside planting. If soil is acid, the color will be a good blue, but if alkaline the color invariably comes pink. Protect in severe weather in much the same way as roses are protected. 2 yrs. old, each \$2.00.

H. paniculata grandiflora. Peegee Hydrangea. A widely planted shrub with huge conical heads of flowers that turn pink as they age. Prune severely in the spring for largest flowers. Grows to 5 or 6 feet. Each \$1.25.

Water-lilies and Other Plants for the Garden Pool

Please Note that these plants have to be shipped direct to you from the pools where they are grown.

CARE OF YOUR WATER-LILIES

Hardy Water-lilies may be planted any time from the first of April until the middle of August. Tropical varieties may be planted when the temperature averages 70 degrees, or about May 25. Water-lilies come into flower early in the season and bloom until frost.

Concrete pools are best left full of water and covered with

boards and straw. Hardy Water-lilies will winter in the pool if the water does not freeze deeply, but tropical ones are best considered as annuals and purchased new each year.

New concrete pools should be filled with water and drained at least four times before any fish or plants are introduced.

Clematis

ON GROWING CLEMATIS

Soil. A rich well-drained loam, loosened by the addition of sand or peat-moss, is best. Make certain that the collar of the plant is set 2 to 3 inches below the surface of the soil. Firm the soil well around the roots. Water frequently in dry weather.

Location. A partially shaded location with 5 to 6 hours' sunshine is ideal. If planted in full sun provide a cool root-run by a good summer mulch of some loose material such as peat, straw, rotted manure, etc.

Fertilizing. Well-rotted manure is preferred with any well-balanced plant-food as a good second. Work it well into the soil with-

out disturbing the roots. Use a little lime occasionally.

Trellis. Provide a support at once—a trellis, wire netting, old stumps, low shrubs, or stone walls.

Winter Mulch. With fall planting of Clematis use a mulch of straw, leaves, or peat-moss for the first winter to prevent the soil from freezing and thawing, which sometimes damages the stems if they are unprotected. Mice and rabbits may be kept from eating the tops by hilling the soil up around the stems or by putting small screens around them. A winter mulch is cheap protection any time.

JACKMANI HYBRIDS

Apple varieties may be classified roughly as self fruitful, partially self fruitful, and self unfruitful. Delicious and Wealthy are two good self-pollinators. Include these varieties with others of your choice from the list below.

Always plant firmly. Leave a mulch of straw manure over plant.

Garden Hints

See illustration on how to cover newly planted roses with earth. This prevents drying of wood and buds and gives roots a chance to get started. Earth protection may be gradually removed after buds have started to make new growth. Plant deep and firm. Water freely.

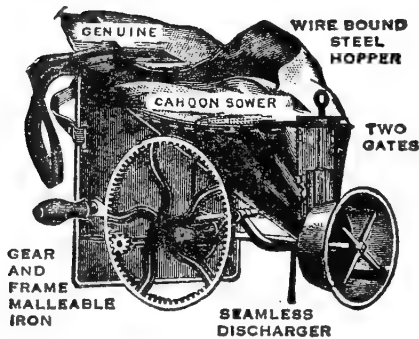

In planting fruit and shade trees, the hole must be large enough to allow the roots to lie in their natural position. Make sure to eliminate all air pockets.

Evergreens should be set a trifle lower than they stood in the nursery. Dig the hole a foot larger than the ball of earth about the roots and fill in with good loam soil, packing firmly by tramping or settling by filling hole with water. Loosen burlap at top of ball and roll back or cut off, but don't remove entire burlap covering.

A pinch of nitrate of soda dropped in the heart of the plant will kill dandelions. In a day or two they have withered and died. At the same time, the nitrate of soda, if not spread or applied too thickly, will benefit the lawn.—Garden Gossip.

This tool is especially suited for hard soil; with its pistol grip it is pushed into the soil, given a quarter turn and then lifted out. The soil is not packed but taken up by the hollow tube automatically through the opening at the top as the next hole is dug. Thus the walls of the hole are not packed which gives the young plants an easy bed for a quick start. Painted red. Diameter of hole, 1 1/8 in. Price, 85c.

Seven Tools in One—Gardex New Interchangeable Cultivator. Only four parts. The wing screw holds all prongs tightly in place, yet permits quick changing to a Cultivator with 1, 2, 3, 4 prongs, thus one can cultivate in rows of various widths or straddle the rows. The one-prong tool can be used in small corners or very narrow rows, because the prong-holder is no wider than the prong itself. Price, \$1.65.

No. 1523. Gardex Cultivator with Weeder. Cultivate and weed with one tool. The 3-prong Cultivator loosens the soil thoroughly while the weeding-blade cuts off weeds quickly. One tool for two purposes. Painted red. 3 prongs 4 1/2 in. wide. Weeding-Blade 4 in. Price, \$1.25.

Endo Weed is absorbed by the leaves and stems of plants and carried down to the very tips of the roots with the sap flow. In three or four days you'll see the weeds start to curl. In just a week or so all signs of the weeds will be gone. Kills dandelions, chickweed, plantain and over 50 other weeds.
